

Best Practices for Assignment <3>: Control Statements in Java

Summary of Learning:

- **Conditional Statements:** You've learned how to use conditional statement to compare the values and execute the code matching the condition
- **Loop Structures:** You've learned for to set up for loop when the number of iterations are known. How to initialize, set up condition and increment/decrement in for loop
- **Understanding Logic:** You've learned how to arrive a solution for a simple problem

Alternative Ways to Complete the Assignment:

- **Using a While Loop:** You can also achieve the same result using a while loop.

Best Practices:

- **Descriptive Variable Names:** Choose variable names that convey their purpose & use camelCase.
- **Test Your Code:** Verify that your code works correctly by testing it with different input values and edge cases. Ensure it produces the expected output.
